

Avante Laser at Urban Retreat Restylane® Consent Form

Restylane® is used to fill in lines and wrinkles in the face and to augment the lips. Restylane can create more pronounced or soft “pouting” lips in conjunction with the body’s own material. Worldwide dermatologists and plastic surgeons have been successfully using Restylane since 1996.

Restylane is a clear, non-animal, biodegradable gel derived from a natural substance called hyaluronic acid. Restylane works with the body’s own natural reserves to create volume. A very fine needle is used to inject a small amount of gel into the skin. The results are instantaneous with a long-lasting, natural enhancement that is safe to your skin.

Common side effects include:

- Temporary redness and slight swelling at injection site
- Minimal bruising at injection site

Restylane lasts approximately twice as long as collagen; therefore, treatments are typically scheduled twice a year. Evidence shows that having a touch-up treatment before the product has fully dissipated will enhance the lasting effect.

I agree that this constitutes full disclosure and it supersedes any previous verbal or written disclosures. I have read and fully understand the above paragraphs and I have had sufficient opportunity for discussion and questions.
